Nepali — Native · English — Professional · Hindi — Conversational · Japanese — Basic

PROFESSIONAL PROFILE

BSc IT graduate and web & mobile developer based in Pokhara, Nepal, with three months of onsite internship experience shipping production-facing features in an agile team, plus three self-directed public projects spanning web, mobile and canvas games. I build responsive interfaces with HTML, CSS and JavaScript and cross-platform Android apps with React Native, Firebase and Java, with particular attention to performance on mid-range Android hardware rather than just a development machine. Looking for a web, mobile or software developer role where I can contribute from day one.

EXPERIENCE

Mobile Developer Intern [Tonic Byte (P) Ltd.]

Jan 2025 – Mar 2025

Onsite internship — Pokhara, Nepal

- Shipped a quiz application end-to-end — animated screen transitions, countdown-timer logic, scoring, a leaderboard and sound feedback.
- Built an AI assistant app covering task management, a news feed and adaptive UI interactions, turning Figma designs into shipped, production-ready screens.
- Refactored navigation and extracted reusable components, removing duplicated screen code across the app and cutting related code volume by roughly.
- Worked day to day with React Native CLI and Tailwind CSS, collaborating in an agile team of to deliver features against sprint deadlines.

Freelance & Independent Developer — Self-directed

2023 – Present

- Designed, built and deployed three public projects spanning web, mobile and canvas-game development — details and metrics below under Projects.
- Set up Git branching workflows and CI-free GitHub Pages deployments for each project, keeping every release reproducible from a clean clone.
- Reviewed code and debugged builds for classmates in study groups, supporting peers across sessions.

PROJECTS IN DETAIL

Quiz App

React Native · Tailwind CSS

Mobile quiz app with a countdown timer, per-question scoring, leaderboard, animated transitions and sound effects. Profiled and tuned to hold a steady frame rate on mid-range Android devices, not just flagship hardware. github.com/RoshanAdhikari10/Quiz-App

FoodSathi

HTML5 · CSS3 · JavaScript

Responsive food-ordering front end built without a framework. Dark/light theming via CSS custom properties, scroll-triggered reveals with IntersectionObserver, and semantic markup that improved search visibility. roshanadhikari10.github.io/FoodSathi

Ping Pong Game

HTML Canvas · JavaScript

Classic Pong rebuilt from scratch with a custom requestAnimationFrame game loop, collision detection written from first principles, adjustable difficulty levels and an AI-controlled paddle. roshanadhikari10.github.io/Ping-pong-game

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React, Tailwind CSS, responsive layout (Flexbox & Grid), CSS custom properties, accessible markup

Mobile: React Native CLI, React Navigation, component architecture, Firebase Auth & Firestore, local storage, Android build & release basics

Languages & Data: Java, Python, C#, MySQL, REST API integration, JSON

Tools & Practice: Git & GitHub, branching workflows, GitHub Pages, VS Code, Android Studio, Figma handoff, Linux, agile teamwork

EDUCATION

Coursework in programming, data structures, databases, networking and software engineering. Final-year project centred on mobile application development and UI design.

WHAT I BRING

- Cross-platform delivery — ships web and Android features without rewriting the work twice.
- Readable, modular code — components a teammate can pick up months later.
- Device-aware UI — tested on real mid-range phones, not only an emulator.
- Fast learner — picked up React Native, Tailwind CSS and Firebase in three months.
